AVAILABLE EDGES

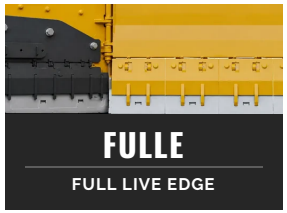

Standard trip edge allows the cutting edge to trip back.

A floating soft drive steel trip edge with carbide inserts for longer wear life, that contours the unevenness of the ground for a cleaner result.

Unique Soft Drive trip edge design allows the individual sections to trip backward without the blade being lifted upward, greatly reducing the impact.

LIVE EDGE sections across the full width of the plow, so the whole cutting edge follows the ground.

The LIVE EDGE sections with a rubber cutting edge: they follow the surface while staying gentle on pavers, stamped concrete and other delicate surfaces.
